

TRAUMATIC BRAIN INJURY SCREENING CENTER

Traumatic Brain Injury (TBI) is a serious type of physical injury that involves a sudden, violent blow or penetrating force that causes the brain to collide with the inside of the bony skull. The severity of TBI may be "mild" with temporary confusion or concussion to "severe" with extended unconsciousness, amnesia, permanent brain damage, loss of body functions, or death. Often, TBI has no external sign; hence, it is called "the invisible injury" and occurs often in car crashes, falls, sports and in military battlefields.

The **TRAUMATIC BRAIN INJURY SCREENING CENTER**, based in the Houston area, now provides a simple, fast, affordable, noninvasive test to screen for mild TBI. Our screening test is offered as part of an ongoing study in mTBI. Tests are done only by appointment, Monday through Friday, 9 am – 4 pm. Parents must accompany minors under 18 years of age. Each screening test with consultation, testing, review of results, and referral if needed is \$330.00. Some health insurance plans may cover this screening test. Call for appointment and special discount for military persons. The mTBI screening test is not a diagnostic test; all tests are conducted by trained and certified professionals.

Screening Testing Procedures:

- Schedule an appointment
- Complete a short health questionnaire
- Perform a 5-minute measurement procedure that is noninvasive and painless
- Entire appointment takes approximately 20 minutes; results within 24 hours
- Parking is free
